

Wiki Overview

[« Guide « Previous](#)

[Next »](#)

Click the “wiki” to come into wiki page

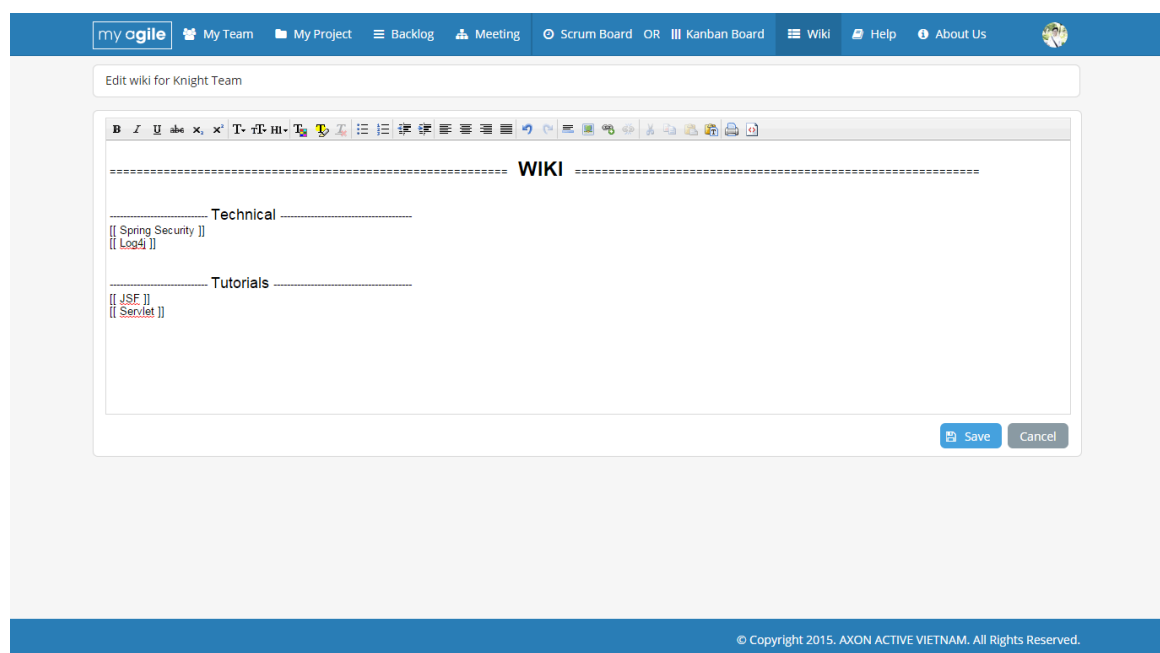

This page is used for saving documents of team.

The screenshot shows the 'my agile' Wiki page. At the top is a navigation bar with links: my agile, My Team, My Project, Backlog, Meeting, Scrum Board, OR, Kanban Board, Wiki, Help, and About Us. Below the navigation bar, there is a 'Select a Team:' dropdown menu set to 'Knight' and an 'Edit Wiki' button. Below this is a large text area for the wiki content. At the bottom of the text area is an 'Attachments:' section with an 'Add file' button. A footer bar at the bottom of the page contains the copyright notice: '© Copyright 2015. AXON ACTIVE VIETNAM. All Rights Reserved.'

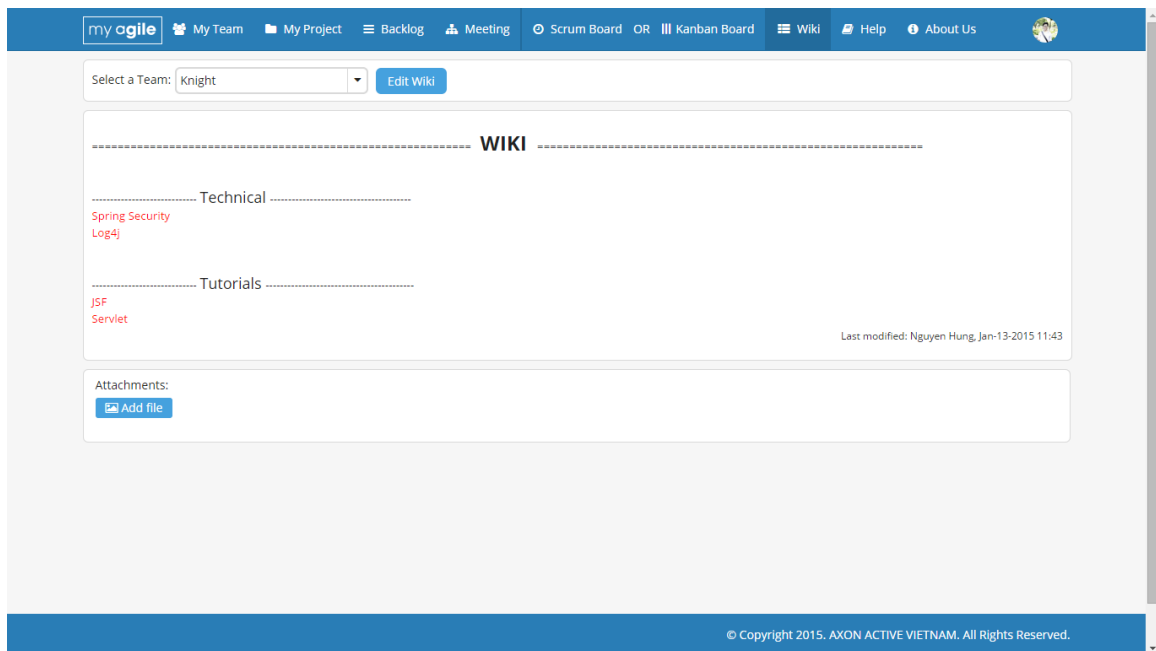

1. Edit wiki

Click the “Edit Wiki” button and create outline for wiki.

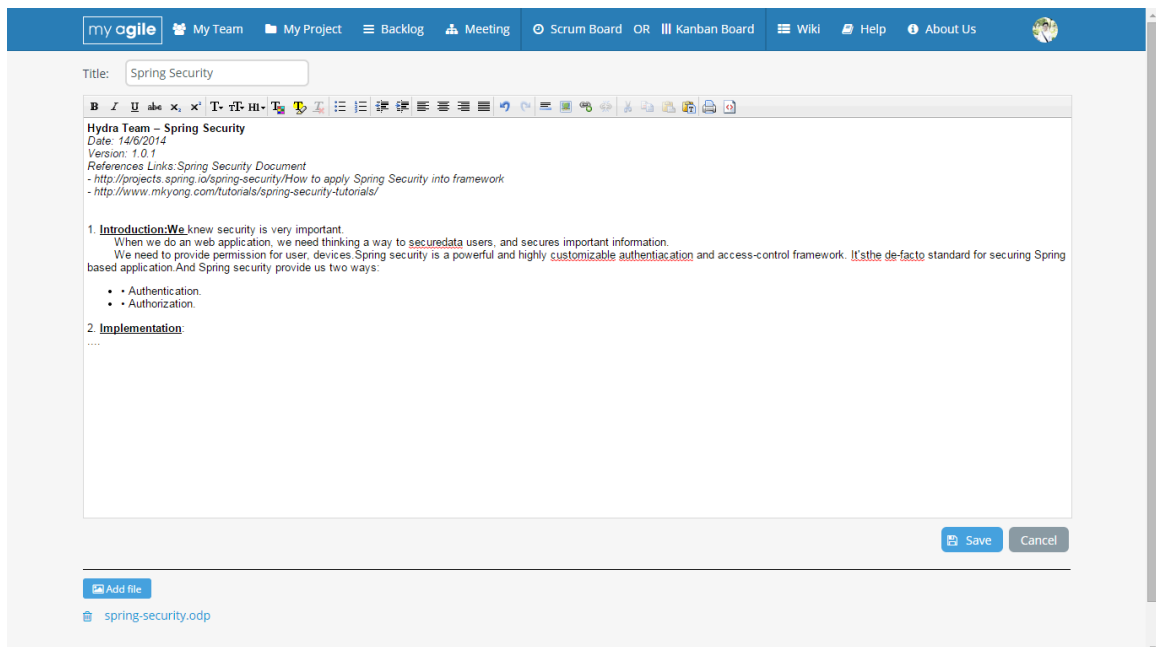

The screenshot shows the 'my agile' Edit Wiki page. The navigation bar is the same as the previous page. Below the navigation bar, there is a title bar that says 'Edit wiki for Knight Team'. Below the title bar is a rich text editor with a toolbar containing various formatting options. The editor contains the following text: '===== WIKI =====', '----- Technical -----', '[[Spring Security]]', '[[Log4j]]', '----- Tutorials -----', '[[JSF]]', and '[[Servlet]]'. At the bottom right of the editor are 'Save' and 'Cancel' buttons. A footer bar at the bottom of the page contains the copyright notice: '© Copyright 2015. AXON ACTIVE VIETNAM. All Rights Reserved.'

Click the “Save” button to finish.

2. View and edit topic

From the wiki page click to the link of the topic to access to that topic. If the topic is empty, system will open the editor for create topic:

- http://projects.spring.io/spring-security/How to apply Spring Security into framework

- http://www.mkyong.com/tutorials/spring-security-tutorials/

1. Introduction:

We knew security is very important.

When we do an web application, we need thinking a way to securedata users, and secures important information.

We need to provide permission for user, devices.Spring security is a powerful and highly customizable authentication and access-control framework. It'sthe de-facto standard for securing Spring based application.And Spring security provide us two ways:

- Authentication.
- Authorization.

2. Implementation:

....
